List of Figures

List of Appendices

1. Summary

EPM 19087 Mount Abbot, comprising 86 sub-blocks was granted to Barlyne Mining P/L on the 29th of July 2011. Barlyne Mining Ltd is a wholly owned subsidiary of Archer Resources Ltd, which was created to hold the company's exploration tenements containing known and potential porphyry style Cu, Mo, Ag and Au deposits. Archer Resources Ltd is a subsidiary of DGR Global Ltd.

Several porphyry and intrusive related molybdenum, copper, gold, prospects are known within the EPM. The main targets are Stockyard Creek, The Springs and Euri Creek.

Stockyard Creek is a 2.5km NW trending zone of intense brecciation and alteration with highly anomalous Cu-Mo and Au geochemistry with much of the zone untested.

The Springs is an intensely sericitised, quartz veined porphyry with visible Cu and Mo mineralisation.

Euri Creek is an 800m x 500m Cu-Mo geochemical anomaly. Previous drilling at Euri Creek returned 99m averaging 0.3% Cu including 10m @ 1.07%Cu, 11.3g/t Ag and 0.133g/t Au; and a 91m hole ending in 12 m @ 0.93% Cu. Gold was not assayed for in the latter hole.

Several other targets comprising areas of intense alteration and magnetic anomalies include Stockyard North, Finley Creek, Sandy Creek and Bogie River and remain untested.

Forty-three sub-blocks were offered for relinquishment after the second year and a further 21 sub-blocks are offered here after the third year.

Thirty-eight stream sediment samples, 165 soil samples and 10 rock-chip samples were collected across the relinquished sub-blocks. There were no anomalies in the stream sediment and soil samples with a gold maximum of 0.004 ppm and 0.005 ppm respectively. The maximum gold in the rock- chips was 0.009 ppm but other rocks reported up to 17 ppm silver and 11050 ppm lead.

2. Introduction

EPM 19087 Mount Abbot, comprising 86 sub-blocks was granted to Barlyne Mining P/L on the 29th of July 2011. Barlyne Mining Ltd is a wholly owned subsidiary of Archer Resources Ltd, which was created to hold the company's exploration tenements containing known and potential porphyry style Cu, Mo, Ag and Au deposits. Archer Resources Ltd (ARL) is a subsidiary of DGR Global.

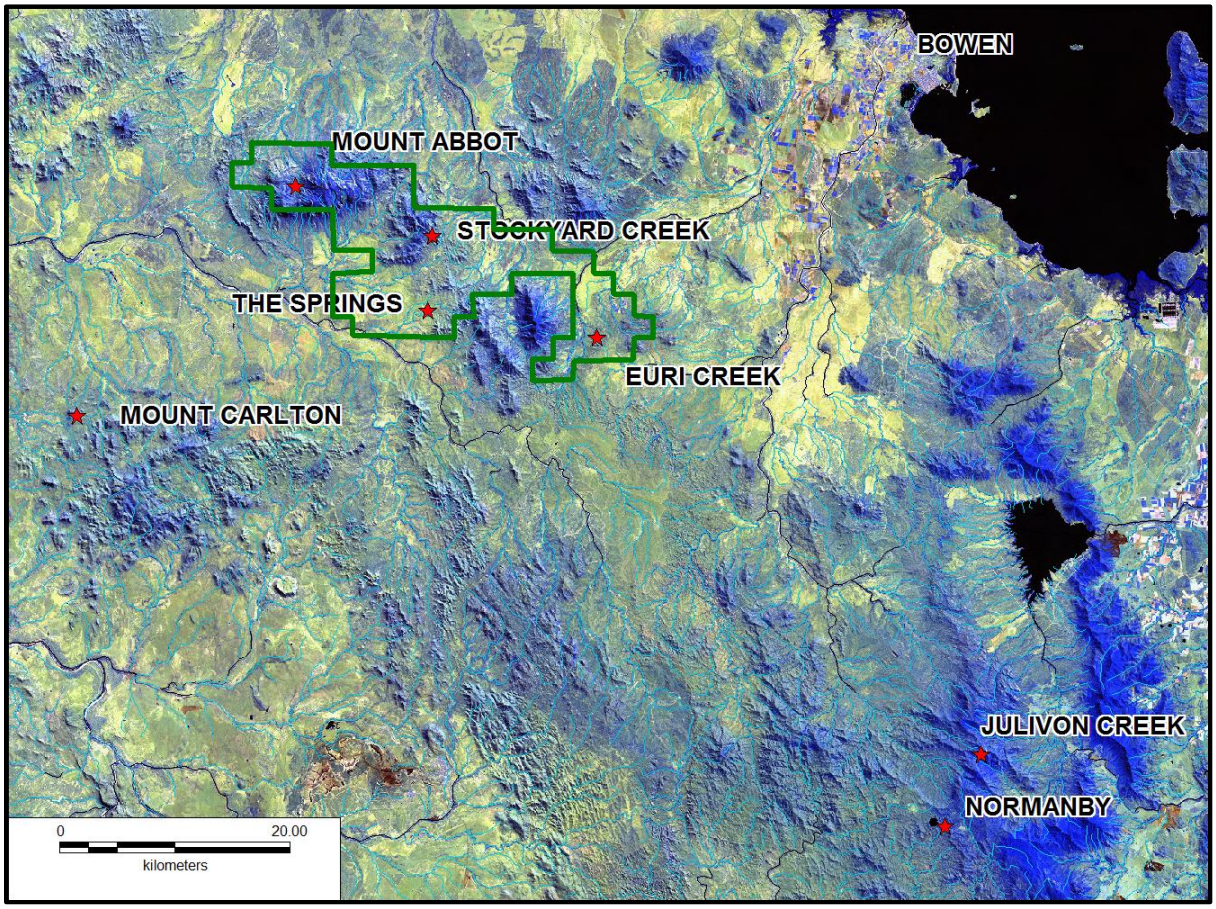

Figure 1. Location of EPM19087 with Prospects (prior to relinquishments).

The Mount Abbot EPM area is situated about 60 km west-south-west of Bowen (Figure 1) on an area of Carboniferous mafic and intermediate and Permian intermediate to felsic intrusive rocksand younger more felsic Cretaceous intrusive rocks. Several porphyry style Cu-Mo targets with associated Au are located within the EPM (Figure 2) and are being investigated by Barlyne Mining.

Access to most of the eastern and central part of the EPM is good during dry weather via dirt roads and property tracks. Much of the north-western part of the EPM and Mount Abbot

itself is accessible only on foot with very few vehicle tracks. Wet weather severely impacts access due to the many creeks cutting through the EPM area. The Bogie River is also difficult to cross during wet weather.

This Partial Relinquishment Report details exploration conducted on the relinquished sub-blocks during the 3 years of tenure.

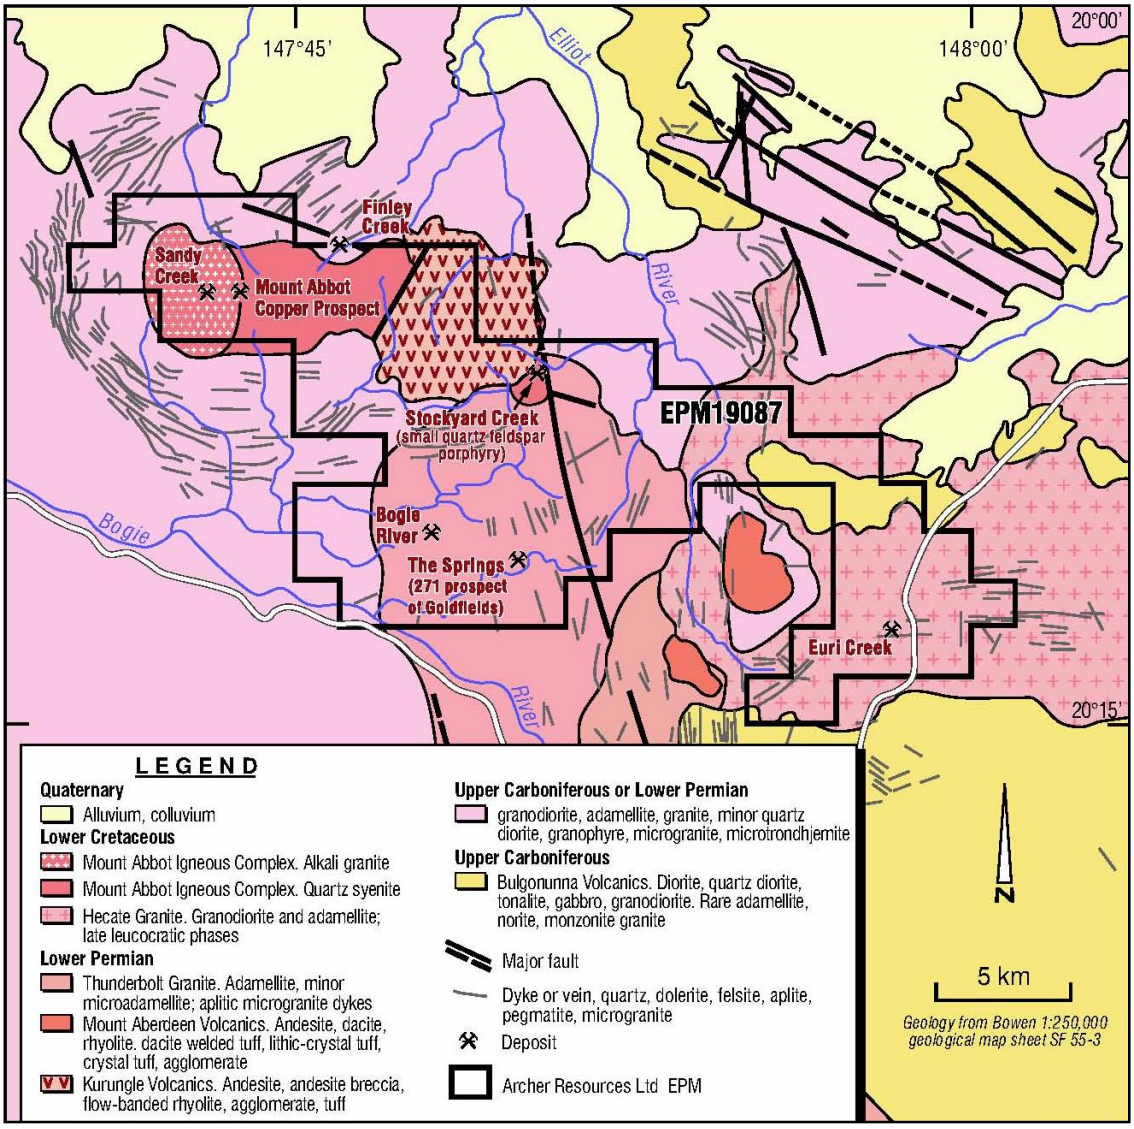

Figure 2. Mount Abbot EPM and known prospects on Qld government geology map (prior to relinquishments).

3.0 Previous Exploration

The majority of previous work was conducted between the late 1960's and early 1980's, and was focused on Cu-Mo porphyry style mineralisation. Very little work has been done since and very few previous exploration work targeted Au mineralisation despite limited assays for gold returning anomalous values. Figure 3 is a summary map of previous work highlights.

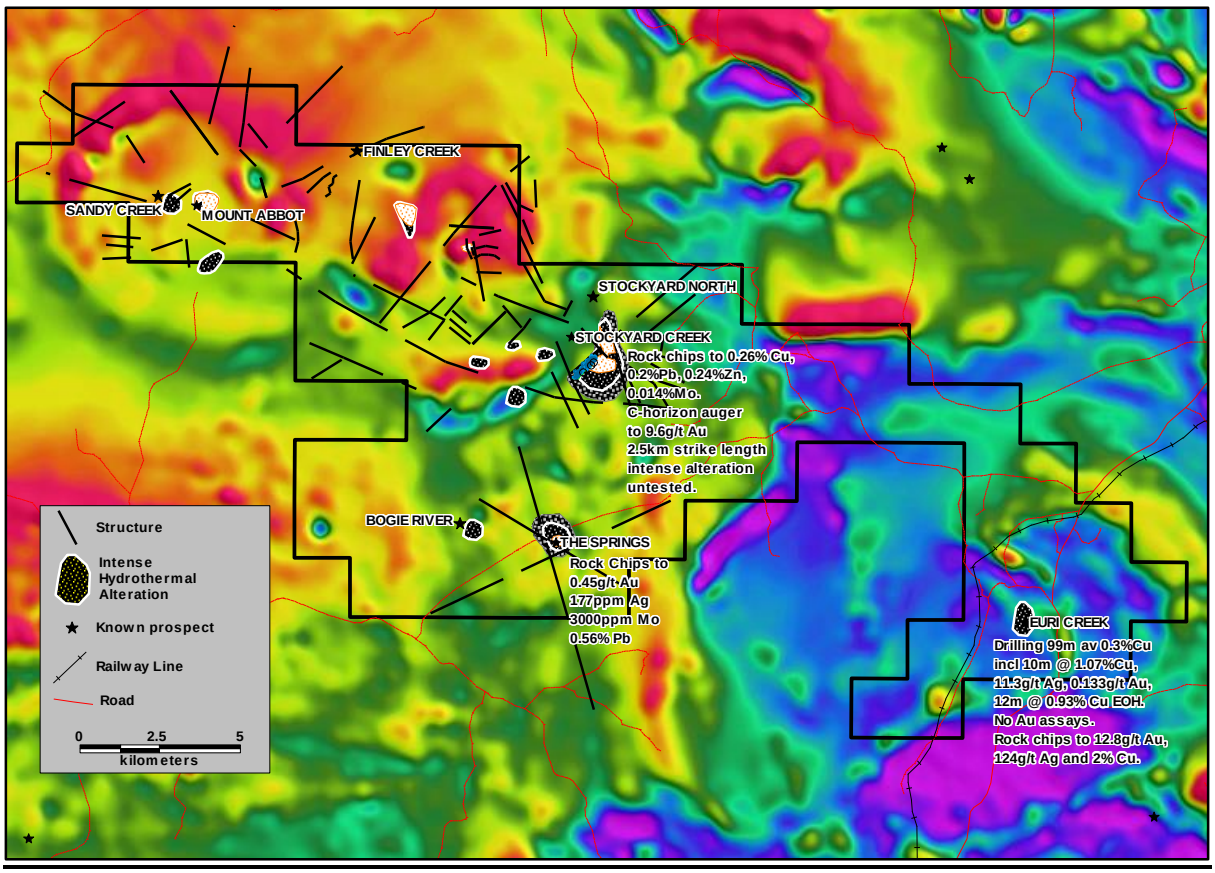

Figure 3. Targets and previous work highlights.

4. Regional and Prospect Geology

Abundant Cretaceous intrusions including the Mount Abbot igneous complex and Hecate Granite intrude the Permo-Carboniferous intrusions and Permian volcanic basement rocks.

The Mount Abbot Igneous Complex is described by the Queensland Geological Survey as a high level intrusive complex and consists of an equigranular, medium to coarse quartz syenite pluton and a siliceous porphoritic alkali microgranite pluton. Ring dyke swarms which intrude late Carboniferous to lower Permian monzonite to granodiorite intrusives, are coeval with the complex. Emplacement of the Cretaceous intrusives was the latest major tectonic event.
Major faults and structural lineaments trend east-south-east and north-north-east.

5. Exploration 29th July 2011 to 28th July 2014

A detailed analysis of open file data and reports was conducted, a synopsis of which is described in the previous work section above. Field work comprised of a regional orientation stream sediment program with more detailed sampling around prospect areas. Thirty-eight stream sediment samples, 165 soil samples and 10 rock-chip samples were collected across the relinquished sub-blocks. There were no anomalies in the stream sediment and soil samples with a gold maximum of 0.004 ppm and 0.005 ppm respectively. The maximum gold in the rock- chips was 0.009 ppm but other rocks reported up to 17 ppm silver and 11050 ppm lead.
The sample assay results are listed in the appendices.

Appendix 3

Rock-chip Sample Description & Assay Results

Zone 55

ALS Brisbane

Sample	Date	Sample Type	Size	Oxidation	Lithology	Alteration	Veining	Mineralisation	Comments
DR06559	13-Jul-12	outcrop	rep	mod-weak	mg monzo				
DR06560	13-Jul-12	outcrop	rep	strong	weathered breccia?				mostly altered to clay
DR06561	13-Jul-12	outcrop	2m rad rep	mod-weak					fg leuk sil/fels ign, some haem alt, fracturing
DR06598	29-Sep-12	flt	select	weak	qtz fx pp	qtz clay alt fx	qtz vn		glassy dogtooth qtz vn, vughy limonitic boxw in pink perphyritic granite, high Bi ck
DR06599	30-Sep-12	flt	select	fresh	qtz fx pp	intense+perv qtz (+ser)		pyr-dissem	pink/red staining
DR06600	30-Sep-12	flt	select	mod	ex qtz fx pp	intense+perv argill	qtz vn		open dogtooth (1cm) qtz vn, limonite stained + boxworked
DR07606	30-Sep-12	float	select	mod	monzonite	SiO2/ser, intense	qtz/sulphide	trace chp, pyr, diss + stringers	lge boulder, alt dk grey+pink, m.gr pink+white fx/qtz/hbl, monzonite
DR07607	30-Sep-12	float	select	weak	monzonite?	intense argillic		crse blocky galena	crse to 5mm size galena cubes, appears open space (cavity) fill
DR07608	30-Sep-12	float	select	mod	ex qtz fx pp	intense argillic+leached	limonitic vn		ck draining from E
DR07609	30-Sep-12	float	select	strong	qtz fx pp	perv qtz-argillic/leached	lim vn ~1cm		int alt qtz fx p, leached, pink stain
