

Integrated information infrastructure

Customer-focused data access

Better accessibility to:

- seismic data
- wireline log data
- geophysical data
- geochemistry data
- hyperspectral data
- three-dimensional data
- mapping data.

Providing the future vision for better accessibility to geoscientific data resources

An enhanced user experience:

- Search by map area or detailed parameters
- Browse through organised and catalogued data sets
- Select to view or download data
- Download or purchase data on DVD
- Shopping cart for purchasing data
- Gain direct contact to qualified staff

Geoscientific data systems refresh

Better accessibility and management of existing geoscientific data sources

2014

Geodatabase

Enabling newer spatial mapping technologies for data delivery

2013

HyLogger online data delivery

Providing online self-service access of HyLogger data via the national AuScope portal

2012

Large spatial data online delivery

Providing online self-service access to large spatial data sets

2011
